

### Philips CareSage Predictive Analytics empower care providers

Delivering key insights to help enhance post-acute care and improve patient outcomes

#### Integrates and processes streams of data

- Demographics
- Geography
- Medical conditions
- Monitored incidents
- Behavior

#### Scores patient risk based on data models

- Predictive algorithm determines risks with ~80% discriminatory accuracy\*
- Identifies risk for potential emergency transport 30 days before the need arises

#### Generates easy-to-use risk analysis and reporting

- Displays risk scores in dashboard for monitoring
- Adjusts scores based on reported incidents signaled through the Philips Lifeline medical alert system

#### Delivers actionable insights to help prompt proactive care

- PCP consultation
- Office visit
- Telephone counseling
- Condition-specific protocol

#### Assists care providers with integrating care

- Review incident outcomes on dashboard
- Leverage data-generated risk predictions in clinical workflows

#### Supports organizations to transform care by helping to:

- Lower costs
- Reduce risks of transport and admission
- Increase patient loyalty

Call your representative to learn about how CareSage can help your organization predict risk to proactively manage patients and extend care.
