

Using wireless technologies strategically placed throughout your community, the CarePoint 6.0 central monitoring software receives, processes and identifies alerts throughout your community, including advanced fall management and controlled access wander management. It aggregates these many discrete data points into robust, flexible reports that are delivered daily to your inbox for your management review and enterprise roll-up reporting.

CarePoint 6.0 software is the data-driven link among several other Philips technologies that are designed to meet the individual and enterprise-wide needs of executives at senior living communities. And although these technologies deliver tremendous value to you by virtue of their sophistication, the good news for you and your staff is that their power comes from their ease of use.

A connected system to help protect your residents

Building on the foundation of the original software operating system, the new CarePoint 6.0 software offers the potential for improved resident care and better staff communication.

Enhanced resident care

The Philips CarePoint system's technologies start with the Philips Lifeline personal alert buttons with AutoAlert fall detection.¹ Using data from these alert buttons and our controlled access wander management technology, the CarePoint Notifier app promptly informs your staff via their mobile devices about particular residents' needs. Wireless receivers throughout your community help staff quickly determine residents' call locations and wander risks.

Better staff communication

In addition to facilitating improved resident care, the CarePoint Notifier app allows staff to communicate with one another and for you to contact them as needed.

Enhanced software to help make your job easier

The Philips CarePoint 6.0 central monitoring software combines all the data it receives throughout your community into daily CarePoint Analytics reporting to help you fine-tune operations. It provides actionable data for single communities as well as for enterprise

roll-up reporting for networks of communities. CarePoint 6.0 central monitoring software is user-friendly and can help both your daily workflow and your larger strategic operational plans.

Easy fit into your community

- Small, unobtrusive footprint in your community
- Modern, intuitive staff communication app for mobile devices
- On-demand, detailed reports for real-time review and email distribution

Ease of use

- Easy-to-run reports configured to your needs
- Straightforward integration into existing Philips systems
- Selective restrictions to doors and elevators as needed
- Direct visibility to residents' needs via alerts

Backwards compatibility

- Integration of back-end systems for robust data capture, better resident care
- Backwards compatibility for paging or radios, and as back-up for emergency conditions

Comprehensive community monitoring

- Waterproof personal help buttons and fall detection pendants
- Controlled access wander management
- Check-in devices, smoke detectors, pressure pads, pull cords and nurse call cords
- Indoor and outdoor monitoring

Improved operational visibility

- Assignment of residents to staff with multi-level escalation as needed
- App data aggregated into CarePoint Analytics reporting

Smooth customer support experience

- Enhanced capabilities for customer support, technical diagnostics and service
- 24/7 technical phone support

Philips remains at the center of emerging technologies that use data to ease the aging journey. The Philips CarePoint 6.0 central monitoring software is designed to help executives at senior living communities manage their operations as effectively as possible while optimizing resident care. Our technologies' emphasis on wellness complement communities' focus on helping to maintain residents' independence for as long as possible.

For more information on the Philips CarePoint 6.0 central monitoring software, please contact your Philips representative or call 1-800-451-0525 in the United States and 1-800-387-8120, ext. 7800 in Canada.

1 AutoAlert does not detect 100% of falls. If able, residents should always push their buttons when they need help. Button signal range may vary due to environmental factors.
